Question 1

Correct

Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
```

```
{
    int i= 1;
```

```
    int s =1;
```

```
    while(s <= n)
    {
        i++;
        s += i;
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

| Input | Result |
|-------|--------|
| 9 | 12 |

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  void function(int n,int c)
3  {
4      c++;
5      int i=1;
6      c++;
7      int s=1;
8      c++;
9      while(s<=n)
10 {
11     c++;
12     i++;
13     c++;
14     s+=i;
15     c++;
16 }
17     printf("%d",c);
18 }
19 int main()
20 {
21     int count=0;
22     int n;
23     scanf("%d",&n);
24     function(n,count);
25 }
```

| | Input | Expected | Got | |
|---|-------|----------|-----|---|
| ✓ | 9 | 12 | 12 | ✓ |
| ✓ | 4 | 9 | 9 | ✓ |

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
