Question 1
Correct
Mark 1.00 out of 1.00
```

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers - Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer - Element1

Second Line Contains Integer - Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)
